BUSINESS FORMS, INC. DEVELOPS NEW PRINTING PROCESS

PITTSBURGH, PA – MARCH 3, 2006 – Business Forms, Inc. (BFI) has developed a printing process that ensures laser compatibility for spot CF and desensitized areas. Previously not compatible with laser printers, the carbonless multi-part forms will allow copy to transfer through the set only in designated areas. The process was created specifically to address the growing need for laser compatibility and BFI will make this type of form available throughout their product line. A patent on the process has been filed.

The Laser-Compatible Spot Carbonless is available in any type of laser form. Sections of the form can be designed so that writing does not carry through to the next page. The print process is useful for such forms as purchase orders, packing slips, medical charts, and requisitions.

Business Forms, Inc. is a division of Liberty-Pittsburgh Systems, Inc. located in Pittsburgh, Pennsylvania. The company specializes in custom forms, checks, snap-outs, and thermal rolls.
